

I'm not robot!

Scratch live 2.4 2 download for mac free. Does scratch work on mac. Scratch 2 free download for mac. Is scratch 2 free.

Your browser has Javascript disabled. Please go to your browser preferences and enable Javascript in order to use Scratch. You can install the Scratch 2.0 editor to work on projects without an internet connection. This version will work on Mac, Windows, and some versions of Linux (32 bit). The Offline Editor can update itself (with user permission). It will check for updates at startup or you can use the "Check for updates" command in the file menu. The current version is v434a. Older Versions of Scratch If you have an older computer, or cannot install the Scratch 2.0 offline editor, you can try installing Scratch 1.4. If your offline editor is crashing directly after Scratch is opened, install the Scratch 2 offline editor again (see step 2 above.) This issue is due to a bug introduced in Adobe Air version 14. (released April 2014). Graphic effects blocks (in "Looks") may slow down projects due to a known Flash bug. The backpack is not yet available. Report Bugs and Glitches Your browser has Javascript disabled. Please go to your browser preferences and enable Javascript in order to use Scratch. Your browser has Javascript disabled. Please go to your browser preferences and enable Javascript in order to use Scratch. Did you just get a brand new Mac? Congrats! It's an excellent machine that you've picked out and it will certainly last you at least the next five years or so, if not more. But how do you get everything set up, especially if you choose not to restore from an old backup? Don't worry, thanks to services like iCloud, the Mac App Store, and other cloud-based storage providers, such as Dropbox, setting up a new Mac is not as tedious as you think. Here are the steps for setting up and customizing your best new Mac from scratch, whether it's a great MacBook Pro, or even an iMac. Step 1: Set up your Mac 16-inch MacBook Pro (Image credit: Rene Ritchie / iMore) Before you can get to the fun of customizing your Mac, you should probably unpack it and set up the new Mac first. Logging into iCloud here will start the process of syncing your keychain, internet accounts, and Desktop & Documents folders (if you have them active), so it's good to do right off the bat. To reauthorize your internet accounts, open the System Preferences, then choose Accounts. Click on the account(s) you wish to activate, checking the appropriate boxes. (Image credit: iMore) iCloud will sync all your internet accounts from another Mac, but any non-Apple account will have to be reauthorized (read: password re-entered) before you can use them again. As such, doing this first on a new machine is ideal. Open System Preferences. Select the Internet Accounts icon. Click on the Account you wish to activate and check the appropriate boxes (Mail, Messages, Notes, and the like). Repeat for each account you wish to reauthorize. MacOS Monterey System Preferences (Image credit: iMore) While you're in System Preferences, you might as well customize some other aspects of your system. This includes, but isn't limited to: Whether you want Dark Mode for your toolbars (General) Changing your desktop picture and screensaver (Desktop & Screen Saver) Your Dock size and preferences (Dock) FileVault and Gatekeeper (Security & Privacy) Notification preferences (Notifications & Focus) How long you want the display to stay on before sleeping (Energy Saver or Battery) Touch Bar customization (Keyboard) Enable Dictation (Keyboard) Multitouch gesture customization (Trackpad) Alert sounds (Sound) Turn on Back to My Mac (iCloud, Sharing) Add other cards to Apple Pay (Wallet & Apple Pay) Add VPNs if necessary (Network) Pair any Bluetooth accessories like headphones (Bluetooth) Add any other fingerprints (Touch ID) Add additional user IDs (Users & Groups) Add any restrictions (Parental Controls) Change Siri preferences (Siri) Set up Time Machine (Time Machine) Add any Accessibility preferences (Accessibility) New Macs should ship with the latest and greatest software, but on the off-chance that you're not on the latest version, check for new updates: Go to the Apple menu in the top left corner. Select App Store. Click on the Updates tab. Install all necessary updates. Check for software updates in Mac App Store. Launch Mac App Store, click Updates in side bar, click Update for whatever you want to update (Image credit: iMore) Step 5: Redownload Mac App Store apps Next, you should redownload Mac App Store apps that you need on the new computer. Go to the Apple menu in the top left corner. Select App Store. From any tab in the Store, click on your Profile at the bottom left of the screen. (You may have to sign in to iCloud again.) Download any previously purchased apps you wish to install on your Mac. Look for the download symbol. Redownload Mac App Store apps on Monterey: Go to your profile, then click the download button (Image credit: iMore) Step 6: Redownload non-Mac App Store apps You'll also want to download non-Mac App Store apps. You won't be able to re-download them from the App Store. Instead, open Safari and download them from their respective websites. A big one here is Dropbox — not only is it good to get your folders synced, but if you use Dropbox for syncing your information (say, 1Password), you'll want it installed so that your passwords are easily accessible. Step 7: Set up your password manager Before you get into customizing Safari and your other apps, make sure you can sign in to all of them by setting up your password manager. (You do have a password manager, right? If not, now is a great time to think about getting one, so you don't have to scrounge for passwords any time you need to set up a device from scratch.) If you don't have a password manager, make sure to check out our recommendations for the best password manager apps for Mac right now. Step 8: Customize the Finder, Safari, and other app views MacOS Monterey Safari Customize Toolbar (Image credit: iMore) The View menu allows most app windows to be pretty thoroughly changed, depending on your preference; a must-customize list includes Finder, Safari, and Mail, but pick the apps you use most often to fix first! This is also the time you might want to customize the Touch Bar for each app if you have a compatible Mac, and or add Favorites to Mail's toolbar (which don't sync via iCloud, for some reason). Step 9: Add Safari extensions Most of us use at least one Safari extension on our Macs, whether that's a Pinterest pinner, Buffer socialer, or even just an ad blocker. After you've customized Safari, it's a great time to configure your Safari extensions. Make sure to check Apple's Standout Safari Extensions (opens in new tab) to see some great Safari extensions that you can grab right now. Step 10: Log in to common websites Whether your internet addiction includes Facebook, Quora, Twitter, Google, or Reddit, chances are there's a web service you can't live without. Go ahead and log into those now, so you don't have to worry about scrounging around for two-factor codes. (You do have two-step authentication set up for those other accounts, right?) Step 11: Make sure Messages is sending from the right iCloud address MacOS Monterey iMessage Settings (Image credit: iMore) When you set up a computer from scratch, you miss out on a critical part of your history: your iMessage archive, which is encrypted and only synced as part of an iCloud backup. As such, you'll need to re-customize your Messages settings, including which address you send from by default. Otherwise, people may not understand why "terribledadjokeslol@icloud.com" is suddenly sending them iMessages. For step-by-step instructions, make sure to check our How to set up iMessage on Mac guide. Step 12: Sign in to Music and Photos Welcome to Photos for Mac (Image credit: iMore) Want to use Apple Music and iCloud Photo Library? You'll need to open Music and Photos before doing so and likely log in with your Apple ID and password. For more information, take a look at our iCloud Music Library and How to set up iCloud Photo Library on Mac guides. Step 13: Enjoy your new Mac! MacBook Pro setup (Image credit: iMore) After all of that customization, take some time to enjoy using it! It's new and shiny, after all. Don't forget to make a Time Machine backup of your Mac this time around, so you don't have to set everything up from scratch again. Looking for a new Mac? If you're still in the market for a new Mac, make sure to check out what we think are the best Mac desktops and MacBooks for 2022. A fresh start for all! While everyone uses their computer differently, these are the most important and basic things to consider setting up first before fully diving in to your brand new Mac. Honestly, these are what we do first when we get a brand new Mac and choose to not restore from an old backup. After all, sometimes it's good to start fresh! Updated May 2022: Updated for the latest version of macOS. For Scratch 3 tutorials try this app (it's better too) app was developed independently of the MIT Scratch Team, which produces the Scratch programming language and online community. The Scratch name and Scratch cat are trademarks of MIT. "Scratch 2 games" brings you a whole bunch of video tutorials to get you going making your own games in the new web based version of scratch. This are not the sort of standard tutorials that you find on the web. During the videos you will be set tasks to do in scratch and hopefully you will be able to complete them on your own. However don't worry the next video in each project will show you how to complete the task! So what will you learn to build in this new version of Scratch? Well there are 3 games to be covered here. A leap back to retro games with "Frogger" and "Breakout", then there is also a guide to how to create your own 2 player "top down racer" game. There's even a quiz in the app so you can test your scratch knowledge too! Scratch really is a fantastic way into learning programming and coding and this app hopefully will be a great asset to get you going with it. This is a big app of just under 300Mb, because there is so much material in it. You will need to be hooked into your WiFi connection!! Also suggest that you set up an account with Scratch before stepping into the screencasts. \*TEACHERS\* the point of this app is that kids can use the iPad alongside the pc to build their games in Scratch. You can just sit back and relax without having to plan anything. Oh and there is enough material to keep your students busy for around 6 hours, even if they don't manage to have a go at the extension tasks that are identified for all 3 games!! IF YOU ARE EXPERIENCING NO SOUND ON YOUR IPAD IT IS BECAUSE YOU NEED TO FLICK THE MUTE SWITCH NEXT TO YOUR VOLUME CONTROL. This app has been updated by Apple to display the Apple Watch app icon. Updates for latest iOS version Oregon beach because it's just showing and it's a game but don't buy don't buy don't buy don't buy don't buy if you buy if you buy you are crazy yeah so you're crazy if you buy this game so don't buy it it's just gives them money and it's dumb I accidentally bought this app for my twin girls. They told me that this was the correct app that they had worked on a science camp. However, turned out not to be the correct program. Do not be fooled; looks like the authentic Scratch program. Waste of money!!!!!! I downloaded because I thought it was an application but, now I know this is scratch video but that also is not working, this is garbage!!!!!! @@@@ @@@@@@@@@ The developer, David Phillips, has not provided details about its privacy practices and handling of data to Apple. The developer will be required to provide privacy details when they submit their next app update.
